AutomationEdge Foundation Certification Practical Paper

Question 1: [15M]

You are provided with an input file containing the following fields:
Order ID, Order Date, Customer Name, Order Amount

---

1. Calculate Order Age, Tax & Final Amount [8 Marks]
Perform the following steps:

- Read the order details from the input Excel file.
- **Calculate Order Age (in days)** using Order Date and current system date.
- **Calculate Tax Amount** based on Order Amount:
  - If Order Amount ≥ 10,000 → Apply **10% tax**
  - If Order Amount < 10,000 → Apply **5% tax**
- **Calculate Final Amount**:
  - Final Amount = Order Amount + Tax Amount
- Add calculated columns:
  - Order Age (Days)
  - Tax Amount
  - Final Amount
- Save the updated data in **Order_Calculated_Details.xlsx**

---

2. Categorize Orders Based on Amount & Age [7 Marks]
Segregate orders into the following output files:

- **HighValueOrders.xlsx**
  - Order Amount ≥ 10,000
- **RecentOrders.csv**
  - Order Age ≤ 7 days
- **OldOrders.csv**
  - Order Age > 7 days

Each file should contain full order details including calculated fields.

Question 2: [10M]

Note: Each step carries marks

1. Open URL https://demoblaze.com/[1M]

2. Click on the Phones [1 M]
3. Click on third phone [1M]

- Fetch product details like name, price and description[3M]
- Add phone to cart [1M]
- Handle alert popups [1M]
